

BE AWARE! Know your responsibilities!

If you accept free soil without verification, the possibility it contains asbestos, or other contaminants is high. Contaminants on your land will impact the property value. A Council or the Environment Protection Authority may require you to clean-up at your cost. Remediation is expensive and time-consuming.

SOIL TO YOU

- Never accept a load of dirt without a check of the paperwork! Always use a certified soil practitioner to do this.
- To legally use waste soil, follow **all** requirements of a resource recovery exemption.
- Without paperwork and the project and transport verification, you the property owner **will** become an illegal dumper on your land.
- **Always** record on your waste register, the source of the soil (as street address or GPS coordinates for 2020), otherwise, the transaction **is** invalid.
- **Always** ask for a loading docket and record that information in your waste register.
- **Always** add the truck registration (not the trailer registration) to the waste register as the delivery truck arrives.
- An Environment Protection Authority (NSW) resource recovery order **must** accompany the soil material classification/certification documents.
- Always get the soil certification documents for their transaction record; **before** the soil is tipped from the truck.
- Always use recovered site soil with the intent to minimise, mitigate and eliminate land degradation.

SOIL FROM YOU

- **Always** supply with the intent to minimise, mitigate and eliminate land degradation.
- **Always** provide a record of the site of delivery (as street address or GPS coordinates); otherwise, the transaction **can be** questioned. Use a waste register.
- To legally supply a waste for reuse on land and property around NSW, follow **all** requirements of a Resource Recovery Exemption **and** the corresponding Resource Recovery Order. **Always** provide the receiver with a valid transaction the Resource Recovery Order, a waste classification or certification, and the relevant Resource Recovery Exemption. Without **all** three, the transfer for reuse to another site is invalid.
